

# This Is Your Planet on Global Warming

## Disrupted Ecosystem

## Drought and Fire

## Glacial, Ice-cap, and Permafrost Melting

## Rising Sea Level

## Extreme Weather Events

Global warming makes the headlines these days, but few of us understand what it really means for the Earth's many diverse landscapes. In 2006, Edward Morris and Susannah Saylor founded The Canary Project, bringing together a team of scientists, writers, and artists to compile visual evidence of climate change. They have photographed landscapes throughout the world that are undergoing dramatic transformation or are vulnerable to predicted changes.
